

We are a successful and growing systems provider within the European space technology group OHB Technology AG, where over 1,500 highly qualified employees based in Germany, Europe and the United States develop and produce space technologies.

For our system engineering division for the programme navigation, we are currently seeking for immediate commencement a

**System Engineer Onboard Software (m/f)
(Code Number 121612)**

Your specific duties will be to:

- act as the interface between the project and the Software department
- analyze the software requirements specified by the customer and for the subsystems
- oversee and supervise implementation of these requirements during the software development phase
- prepare test bench tests (hardware/software integration tests) and satellite engineering model tests
- produce and maintain documentation (specifications, design descriptions, ICDs, test procedures and reports)
- participate in project reviews
- support satellite projects from the proposal phase through to the in-orbit commission

Your background:

You have a degree in engineering with a major in computer technology or comparable qualifications as well as relevant professional experience. You are communicative and enjoy working on large projects in a team. Your strengths include flexibility, responsibility, an independent and effective approach to your work as well as the ability to swiftly work your way into new duties. We also expect a confident approach to customers and the willingness to travel as well as good skills in spoken and written English. Experience in DAL-A/B level software would be of advantage.

We offer you an interesting and varied position in a modern high-tech company. Have we aroused your interest? If so, we would be pleased to receive your detailed application stating your salary expectations and the code number above by e-mail.
