

We are a successful and growing systems provider within the European space technology group OHB Technology AG, where over 1,500 highly qualified employees based in Germany, Europe and the United States develop and produce space technologies.

For our software division for the programme navigation, we are currently seeking for immediate commencement a

**Embedded Software Architect (m/f)
(Code number 21512)**

Your specific duties will be to:

- implement an end-to-end software development process for a satellite subsystem including the specification phase, design, coding and verification right through to final customer acceptance
- co-ordinate and document all the steps in software development steps
- design and execute integration tests on the target platform and support the system tests
- work closely with the other subsystems and subcontractors
- report to the project management and the customer on the progress achieved

Your background:

You have a degree in engineering with a major in electrical engineering, computer technology, space technology or comparable qualifications. As well as this, you have several years of professional experience as a software or system engineer in the area of embedded software, ideally in aviation or space technology. It would also be desirable for you to have experience in project planning and co-ordination as well as in software development approaches. We would also welcome experience in the use of real-time operating systems (e.g. RTEMS, VxWorks, NUCLEUS) as well as knowledge of DOORS, UML, INNOVATOR, IBM Rational Rose, C, C++, C#. We assume that you have good skills in written and spoken English.

We offer you an interesting and varied position in a modern high-tech company. Have we aroused your interest? If so, we would be pleased to receive your detailed application by e-mail stating your salary expectations and the code number above.
